WANGEN pumps Type KL-T

The WANGEN Type KL-T progressing cavity pump can be used as an immersion pump for conveying media from containers and basins. The conveyed media – whether liquid, abrasive, lumpy, sticky or highly viscous – are handled gently and without impairment of their structure and quality.

Technical description

- Service-proven sealing systems
- Specially designed joints
- Various geometries and pump sizes
- Special feed unit versions possible

Applications

WANGEN Type KL-T pumps have proven themselves in many different fields of application. They are used for:

- Filling
- Transfer pumping
- Rinsing
- Dosing
- Feeding

Advantages and features

- Low-pulsation, continuous conveyance independent of pressure and viscosity
- Self-priming
- High dosing precision even at low speeds
- Rigorous modular principle simplifies the handling of spare parts
- Little space required thanks to vertical design
- Configuration and length according to the customer's wishes
- Maintenance-friendly
- High operational reliability
- Excellent price/performance ratio

Performance

Typ	Flowrate	Pressure
20	0,002 m³/h	0 bar
25	up to	up to
30	150 m³/h	40 bar
